Assignment 1

DevSecOps

In this assignment you need to implement Circle CI as explained in the book "Securing DevOps" by Julien Vehent.

1) Create your own Github repo for code and Docker credentials for uploading docker image.
2) Read chapter 2 and the github repo for instructions of setting up Circle CI
   https://github.com/Securing-DevOps/invoicer-chapter2
3) You need to define Circle CI pipeline steps
   a. Build code
   b. Run unit tests
   c. Build docker image
   d. Upload docker image to docker hub

No need to deploy the image on AWS.

You need to submit in a word document:

1) Screenshots of github repo, docker image and docker hub uploaded docker image
2) Logs of Circle CI
